

The specialist of Digital Radio transmission systems

Radio Content Providers

Increase you audience with DRM by inserting added value services related to your audio program

ALTO DRM Content Server from DIGIDIA

DRM allows your listener to have the same listening comfort as FM today, but using the AM (LW/MW) and the SW existing bands. Thanks to the **ALTO** DRM Content Server from **DIGIDIA**, your listener will then get:

- Your program in FM-like audio quality,
- Your station name displayed on the receiver,
- Text messages related to your program (artist name, song title...) displayed on the receiver,
- Filtering possibilities (by language or by Program Type),
- And even more...

Plus:

- Broadcast up to four different audio programs (four multi-languages speech programs for instance),
- Insert other multimedia data to enrich your content such Electronic Program Guide (EPG), as tourist information, traffic information, weather information ...
- Always reach your listener wherever he is with the Automatic Frequency Switching (AFS),
- Insert synchronization information for building a Single Frequency Network (SFN) for your coverage (mandatory for that feature: the external **DIAPASON** GPS receiver from **DIGIDIA**),
- Secure your DRM transmission system with 1+1 redundant solution from **DIGIDIA**
