

The specialist of Digital Radio transmission systems

Synchronous FM Transmission System

Take full benefit of a secured, transparent and cost efficient IP network, for all your Synchronous FM applications

Main Benefits

- Transparent and high level secured IP transport stream (FEC: Forward Error Correction and interleaving processes),
- Automatic synchronization process. Common and precise broadcasting time for all the FM transmitters (500ns tolerance; possibility to add static delays for separate FM transmitters),
- MPEG Layer2 compression process for the audio (fully compliant with DAB including the transport layer i.e. ETI over IP)

And also...

- Configuration, set-up, monitoring & maintenance features available through a friendly Graphical User Interface (HTML pages) accessible by Web. All the products are delivered with their MIB (Management Information Base) supplied as a standard feature (SNMP agent included),
- Optional: Switching to an announcement program through additional audio/RDS data inputs.
